Location

London

Project Overview

This contemporary front garden in West Finchley, London was designed by garden designer, Jaki Grosvenor. As with many suburban properties, the front garden of this semi-detached house in North London had been almost entirely paved over. The owners wanted a practical solution to improve the look of the front garden whilst retaining parking for one car and safe, level access across the garden to the front door. In order to improve the aesthetic of the front of the property and adhere to sustainable drainage strategies, additional planting beds were reinstated to soak up excess rainwater and prevent flooding. As the garden was on a slope, a natural-looking, permeable paving solution was proposed for the driveway and paths.

A low maintenance planting scheme consisting of ornamental grasses, small shrubs, and bulbous perennials for year-round curb appeal was proposed, proving you can park cars and still have room for plants.

Installation Details

The total transformation of this urban front garden in London involved a number of hard landscaping elements including new retaining walls constructed in block and brickwork, beautifully rendered with natural stone copings. The construction of new steps and path leading to the front door and a contemporary gravel and stone step-stone style path leading to the driveway. The landscaper's attention to detail and ensuring the finishes were just right is clear to see in the finished project. Nidagravel 129 gravel grids were selected and carefully cut to fit to ensure the gravel sections in the garden design were also perfectly finished. A beautiful planting scheme was then added including the planting of an olive tree and a range of drought tolerant plants to complete the overall design.

Front Garden Design

The finished results

This project is a great example of how an experienced garden designer and a team of expert landscapers really can transform a space. The difference the scheme has made is truly amazing. The owners must look forward to coming home everyday and seeing this beautiful and welcoming front garden.

“Clean lines, simplicity and a decidedly seaside feel are the hallmarks of this sustainable front garden in North London. Designed to be transportive and to lift the spirits, and the neighbourhood. Who needs to go on holiday!”

Nidagravel 129 - Gravel Stabilisation Grids

Category	Gravel stabilisation
Application	Driveways, paths, patios and car parks
Traffic	Pedestrian, bikes, cars, vans, 4x4's, trucks
Material	Polypropylene
Structure	Honeycomb
Dimensions	1.2m long x 0.8m wide
Coverage	0.96 SQM per sheet
Grid Thickness	29mm (membrane bonded to the underside)
Colour	White
Cell Size	50mm (Hexagonal)
Max Gradient	Use on slopes up to 15%
Sheet weight	Unfilled 1.4 kg per SQM / 1.34 kg per sheet
Strength	Compressive strength 300 tonnes per SQM
Gravel Fill	Approx 70 kg per SQM / 68 kg per sheet
Gravel Size	4 - 12mm (max size approx 10mm)
Gravel Type	Any angular decorative gravel or chipping

Why choose Nidagravel grids?

Nidagravel grids have been manufactured to the highest standards by Nidaplast Honeycombs for over 35 years having originally developed the cellular gravel retention system. Nidagravel offers the best solution for a stable, 100% permeable, SuDS compliant, high-performance and low-maintenance gravel surface for paths, driveways and car parks. We are dedicated to providing the best possible solutions, technical support and first-class service to our customers all over the UK.

Visit our website for further information on our gravel stabilisation range and to order online with speedy delivery of your order in 48 hours.
